Hydrant-Runner™

The Hydrant-Runner™ provides an invaluable water resource to support fire response in rural and urban neighborhoods. This all-in-one unit contains everything needed to set up a 300 GPM pumping operation from neighborhood swimming pools, creeks, canals or ponds. One person can deliver, set-up and leave the system primed and running to quickly refill Engines and Water Tenders/Tankers for structure protection.

The scissor lift chassis enables one person to easily load or unload the unit on any 2" trailer hitch where it rides like a cargo carrier. Once on the ground, it rolls like a cart and is narrow enough to fit through doors and gates.

HYDRANT-RUNNER™ FEATURES

- The Hydrant-Runner™ can be delivered, set up and left running at a water source, freeing valuable apparatus to fight fire rather than dedicated to pumping operations.
- A great investment for Fire Departments or Home Owner's Associations in wildland urban interface communities as a quick and portable water source.
- In flood prone areas, the Hydrant-Runner™ can be quickly and easily deployed by Home Owners, Fire Departments or Utility Companies to de-water flooded homes and businesses.
- The narrow chassis fits through standard doorways and gates allowing you set up pumping operations almost anywhere.
- The entire system is connected together with cam locks, so no tools are required during set up.
- The pump can be removed from the platform for stand-alone operation.

- The PodRunner® Hitch Adapter works with any 2" class 3/4 trailer hitch with no vehicle modifications.*
- Once mounted on the vehicle, the tires lift up off the ground and can rotate above the frame for substantial road clearance.
- Standard 4 pin trailer connection powers running lights, turn signals and license plate illumination.

The Hydrant-Runner™ has a built-in storage box for extra gaskets and general tools.

All components are connected with 3" nylon cam lock connectors for easy setup and break down. Storage compartments allow for drainage and ventilation.

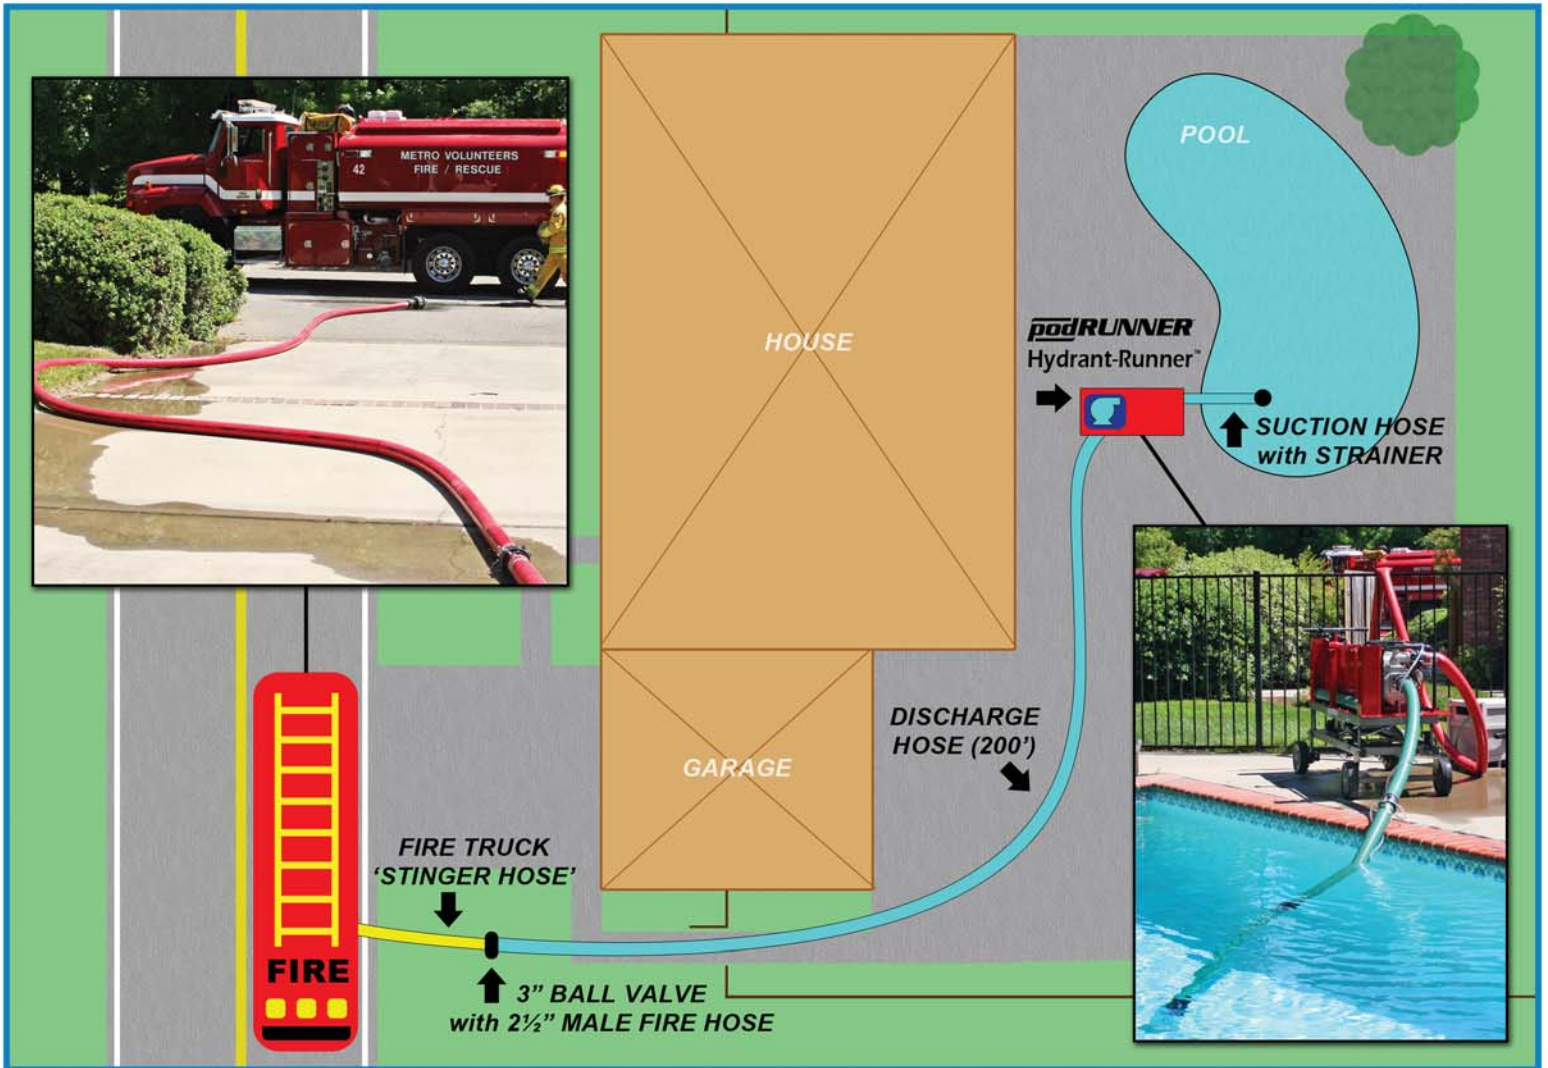

Comes with all of the components needed to quickly set up a high flow pumping operation for drafting or de-watering.

Hydrant-Runner™

PR-HYD-01

OPERATION

Once the Hydrant-Runner™ has been delivered to a water source, set-up takes about 10 minutes and requires no specialty tooling. Sections of hard suction hose and a strainer are connected to the pump with quick connect cam locks and put into the pool. 200' of 3" discharge hose with a ball valve and fire department hose fitting is then rolled out to the street. Any Fire Truck or Water Tender will be able to fill their tanks within minutes and quickly resume structure protection. A special bypass valve on the pump allows it to run continuously without overheating.

WARRANTY

Rescue 42 limited warranty covers the Hydrant-Runner™ for one year against manufacturer defect.

INCLUDED COMPONENTS

- All components connected with 3" nylon camlock connectors
- (4) 5' sections of 3" hard suction hose
 - (4) 50' Goodyear 3" low pressure discharge hoses
 - (1) 3" ball valve with a 2 1/2" male fire hose connector
 - (1) Suction strainer
 - (1) 1 gallon gas can
 - (2) Adjustable pump mounting channels with pins
 - (3) Spare camlock gaskets
 - (1) Runner (Chassis)
 - (1) Hitch Adapter

HYDRANT-RUNNER™ OPTIONS

- Weather-resistant Cover with Attachment Straps
- Honda WB30 General Purpose Pump - 275 GPM
- Honda WT30 Trash Pump - 317 GPM
