

Star-Runner™ delivers an auto-acquiring satellite antenna with Ka-band speeds and cost effective data plans to virtually any location quickly, efficiently and reliably. Its rugged design and NEMA 4 rated enclosure ensures reliable functionality on remote deployments, while its compact size allows it to be taken into buildings and on elevators for urban applications.

Unrivaled Portability - it rolls like a cart, then easily elevates and attaches to any vehicle with a 2" trailer hitch where it rides, wheels up, like a cargo carrier.

Star-Runner™ Benefits:

- Lower capital investment and maintenance costs
- Compact storage - closet, garage or apparatus bay
- Faster connections - up to 25 Mbps down / 9 Mbps up*
- More data capacity and simultaneous users
- User-defined electronic packages

Internet Connection Anywhere - Anytime

The Star-Runner™ provides short and long term IP connectivity virtually anywhere - from urban roof tops to remote mountain tops, and is more versatile, cost effective and faster than traditional COWS, COLTS or Fly-away kits.

Star-Runner™ is THE solution for:

- Business continuity
- Remote site connectivity
- Alternate IP path requirements
- Assured connectivity for disaster response & recovery (including FirstNet)
- Temporary internet surge capacity (sporting events, concerts, etc)

...and THE alternate pathway for:

- Cellular calls/text over Wi-Fi
- Wireless devices
- Ethernet devices
- Voice and Radio over IP (VoIP/RoIP)
- Small Cell Sites
- Restoration of workplace internet

*When using Winegard WV750A Antenna

Take Your Star-Runner™ Anywhere!

Star-Runner™ mounts itself to any standard 2", class 3 trailer hitch, and because the wheels are off the ground during transport, it does not have the registration costs and road restrictions of a trailer. There are no special driver qualifications or modifications to the vehicle.

One person can easily move hundreds of pounds of equipment from storage to deployment without lifting or straining, thereby reducing the potential for injury.

Star-Runner™ Features

The combination of faster data speeds with unrivaled portability make the Star-Runner™ an operational game changer.

- All-in-one solution with a quick, intuitive setup
- Single button, smart antenna acquisition
- Electronics bay accommodates routers, radios, switches, satellite modems, repeaters, servers, etc.
- Secure, NEMA 4 enclosure with environmental control options
- Extendable mast options for Wi-Fi, RF antennas, cameras and lighting
- Multiple power source options
- Removable antenna platform for rooftop deployment
