Command-Runner™

Portable Communication & Command System

Unrivaled Mobility - Custom Configurations

The Command-Runner™ provides a customizable, mobile platform for command, communications, data and incident management. The secure, weather resistant enclosure can be configured with radios, VoIP, Wi-Fi, computers, monitors, cameras, printers, drawers and charging ports to support nearly any type of field operation.

The unit rolls like a cart, then easily mounts to any vehicle's 2" trailer hitch where it rides, wheels up, like a cargo carrier. A single person can transport and deploy an all-in-one command center in minutes.

The narrow chassis fits through doorways and into most elevators, so the Command-Runner™ is versatile both indoors and out. Your command and communications is no longer restricted to a parking lot.

Command-Runner™ is the perfect solution for:

- **Emergency Incident Command**
  - Command and communication for Fire/Rescue, Law Enforcement & First Responders
  - Tornado, fire, flood, earthquake, hurricane or terrorism
- **Tactical Dispatch**
  - On-site dispatch and communication for SWAT, Search & Rescue, and inter-agency teams
  - Active shooter, hostage, and mass triage scenes
- **Mobile Security Control Center**
  - All-in-one mobile security console for video monitoring, access and alarm systems
  - Enables multiple safe backup sites on a quick deploy basis
  - Hospital and school campuses, business, sporting venues and government locations
- **Non-emergency event/crowd management**
  - Communication center for handling assets, guest management, first aid, and security
  - Public relations events, parades, and races
