

## ***The SatRunner™ for Internet Connectivity Anytime. Anywhere.***

Imagine a loss of Internet.

What would that look like for your company? How would it affect your daily operations? Could you still do business? Most importantly, how much would this interruption downtime *cost* your company?

**The SatRunner™ is *the* solution. When Internet goes down—no matter the reason—we get you and your Team connected again. The SatRunner™ provides extremely reliable Satellite-supplied Internet. Anytime. Anywhere.**

Perhaps you believe your company is sufficiently covered. You have cloud-based databases and you use a VoIP phone system. *Yet, none of these factors will matter if you don't have Internet.* It's been estimated through industry surveys that Internet downtime can cost businesses \$8,000 to \$75,000 or more per hour. Temporary loss of Internet connectivity means disruptions in business efficiency, employee productivity and loss of revenue opportunity. Not to mention the value of your company's reputation, customer loyalty, human resources, payment processing, and other aspects of business operations that rely on Internet.

Internet outages? Network disruptions? Cyber-attack on your ISP? Relocation of your workforce? Not a problem! The SatRunner™ gets you connected to the Internet via Satellite in no time! You're back up and running to access the cloud, connect your VoIP phones, use your email, enable Cellular devices via Wi-Fi Calling, continue payment processing, etc.

Its unique design allows for effortless storage and mobility. Easily delivered by a single person without lifting, the SatRunner™ can be stored indoors and can roll through standard doorways. The SatRunner™ is easily transported on the back of any vehicle with a trailer hitch, making remote network operations for special events, remote facility support, or temporary business relocation seamless.

The SatRunner™ is automated and requires very little training to operate. It provides multiple pathways to support a Wi-Fi Hotspot (which provides normal Cell Phone use via Wi-Fi Calling) and Ethernet, which can be plugged into your building's router to restore Internet.

What makes the SatRunner™ even more exceptional is its affordability. With a list price of just \$49,995 and free shipping, this critical Business Continuity and Disaster Recovery tool is priced right for any business' BC/DR budget. New data plans have brought the cost of Satellite data down to where Satellite Internet is an extremely viable back-up resource.

It is well known that most businesses fail to adequately plan for a disruptive event such as loss of Internet. Even businesses having a BC/DR plan often don't recognize the catastrophic impact associated with loss of Internet service. This doesn't have to be you! With the SatRunner™, your business *can* continue day-to-day and displaced/remote operations despite a loss of Internet. Or you can simply take the Internet with you to support operations or customers wherever it's needed!
