

Star-Runner™ Quick Reference Card

Deploying the Winegard WV750 Satellite Antenna-

1. Set up your Star-Runner™ in an appropriate location with a southern view of the sky on level ground and complete the Stabilizer Set-Up Card.
2. Turn on the master power switch to the Star-Runner™
3. Wait 10 seconds and turn on the Winegard WV750 controller using its small green power button.

4. Allow the Winegard WV750 controller to boot up and gather its heading. Several progress bars will fill. When your screen looks like this (Fig 1) you are ready to continue. The process takes about 3 minutes. During this process, set-up your generator or shore connections (if applicable).

Figure 1 Ready to Find Satellite Screen on Winegard WV750 Controller

5. Press the Large green button on the Winegard WV750 controller screen that is labeled "Find Satellite" (Fig 1)

6. The Winegard WV750 dish will begin moving and search for the satellite. This process should take 2-3 minutes. When the screen on the Winegard controller looks like this you are connected. (Fig 2) Note that on the bottom left the text will read "Signal Online".

Figure 2 Completed and Connected Screen

7. Now you are connected. Stowing is the reverse of deploying.
